Equipalazone®

For the treatment of musculoskeletal disorders in horses and ponies.

Equipalazone® contains phenylbutazone that is an effective anti-inflammatory which can offer relief in lameness associated with osteoarthritic conditions and is also used for acute and chronic laminitis (inflammation of hoof tissue), bursitis, carpalis (inflammation of synovial fluid around joints) and in the reduction of post-surgical soft tissue reaction.

Usage Details

Horses 450 kg body weight: Two sachets to be administered twice on day one (equivalent to 8.8 mg/kg/day) followed by one sachet twice daily for four days (4.4 mg/kg/day), then one sachet daily or on alternate days sufficient to keep the horse comfortable (2.2 mg/kg/day).

Ponies 225 kg body weight: One sachet (4.4 mg/kg/day) on alternate days.

Adjust dose according to body weight.

Discontinue treatment if no response is evident after four to five days treatment.

Equipalazone 1 g Oral Powder should be mixed with a small quantity of feed.

ACVM Registration No: A004564

Equipalazone® Features:

-  Presented as 1g powder in easily teared sachets.
-  For oral only administration with a small quantity of feed.
-  Designed to be more palatable for equids, due to each granule of phenylbutazone being encapsulated with microcaps technology. Limits feed sorting and increases oral uptake.
